Building security assurance in open  
infrastructures

Albin Zuccato, 21.09.2005

# Consortium

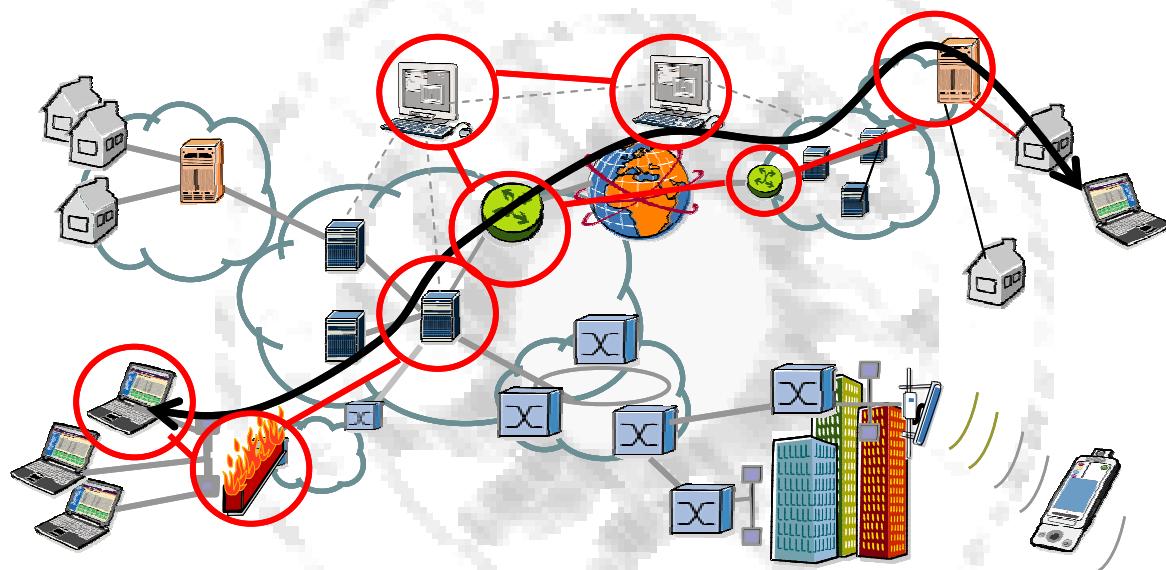

# Focus

---

■ The main focus is to **build a framework** providing and integrating means to measure the security assurance of a telecommunications infrastructure as well as the provided services above it.

# Telecom Networks

# Security versus assurance

Security Situational awareness

1 = How Secure am I ?

Enhanced Security Situational Awareness

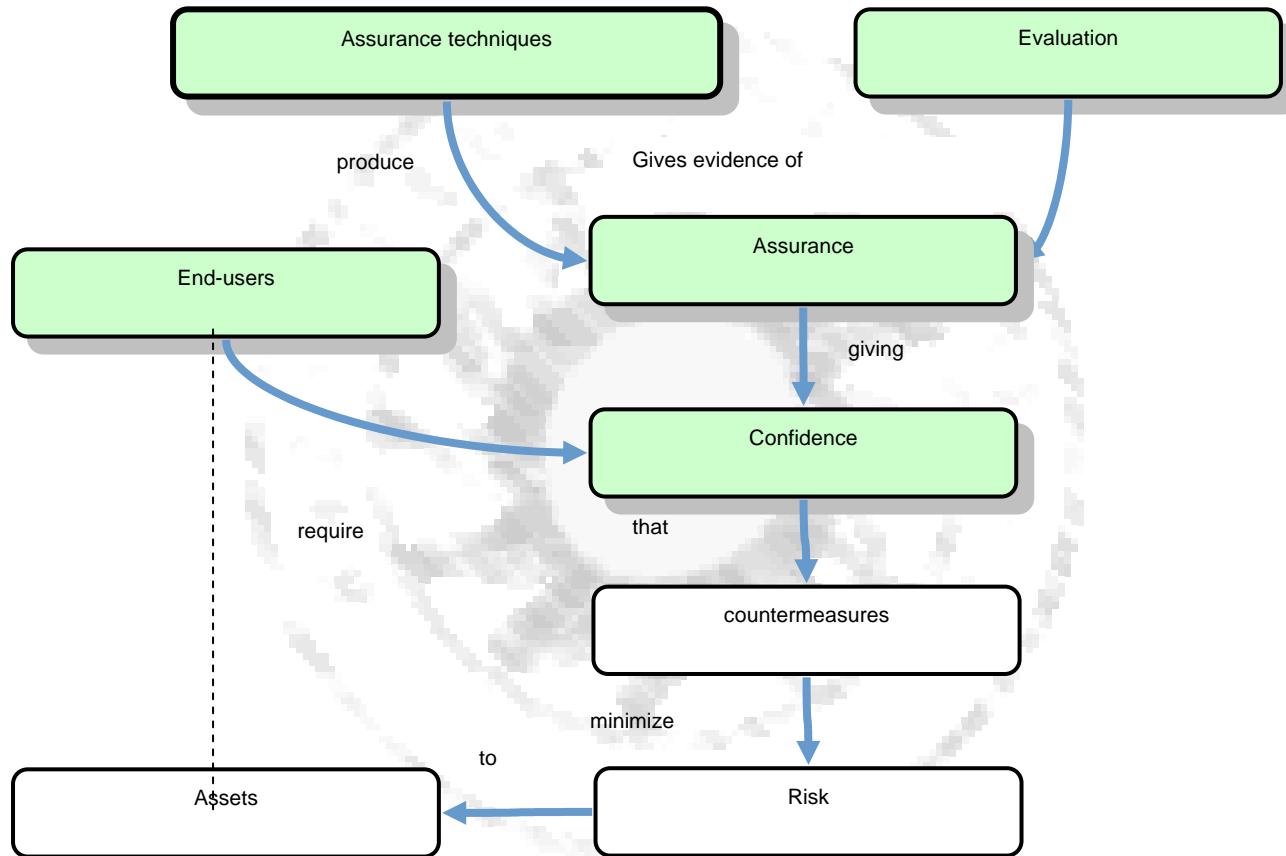

2 = 1 + How confident am I on the answer ?

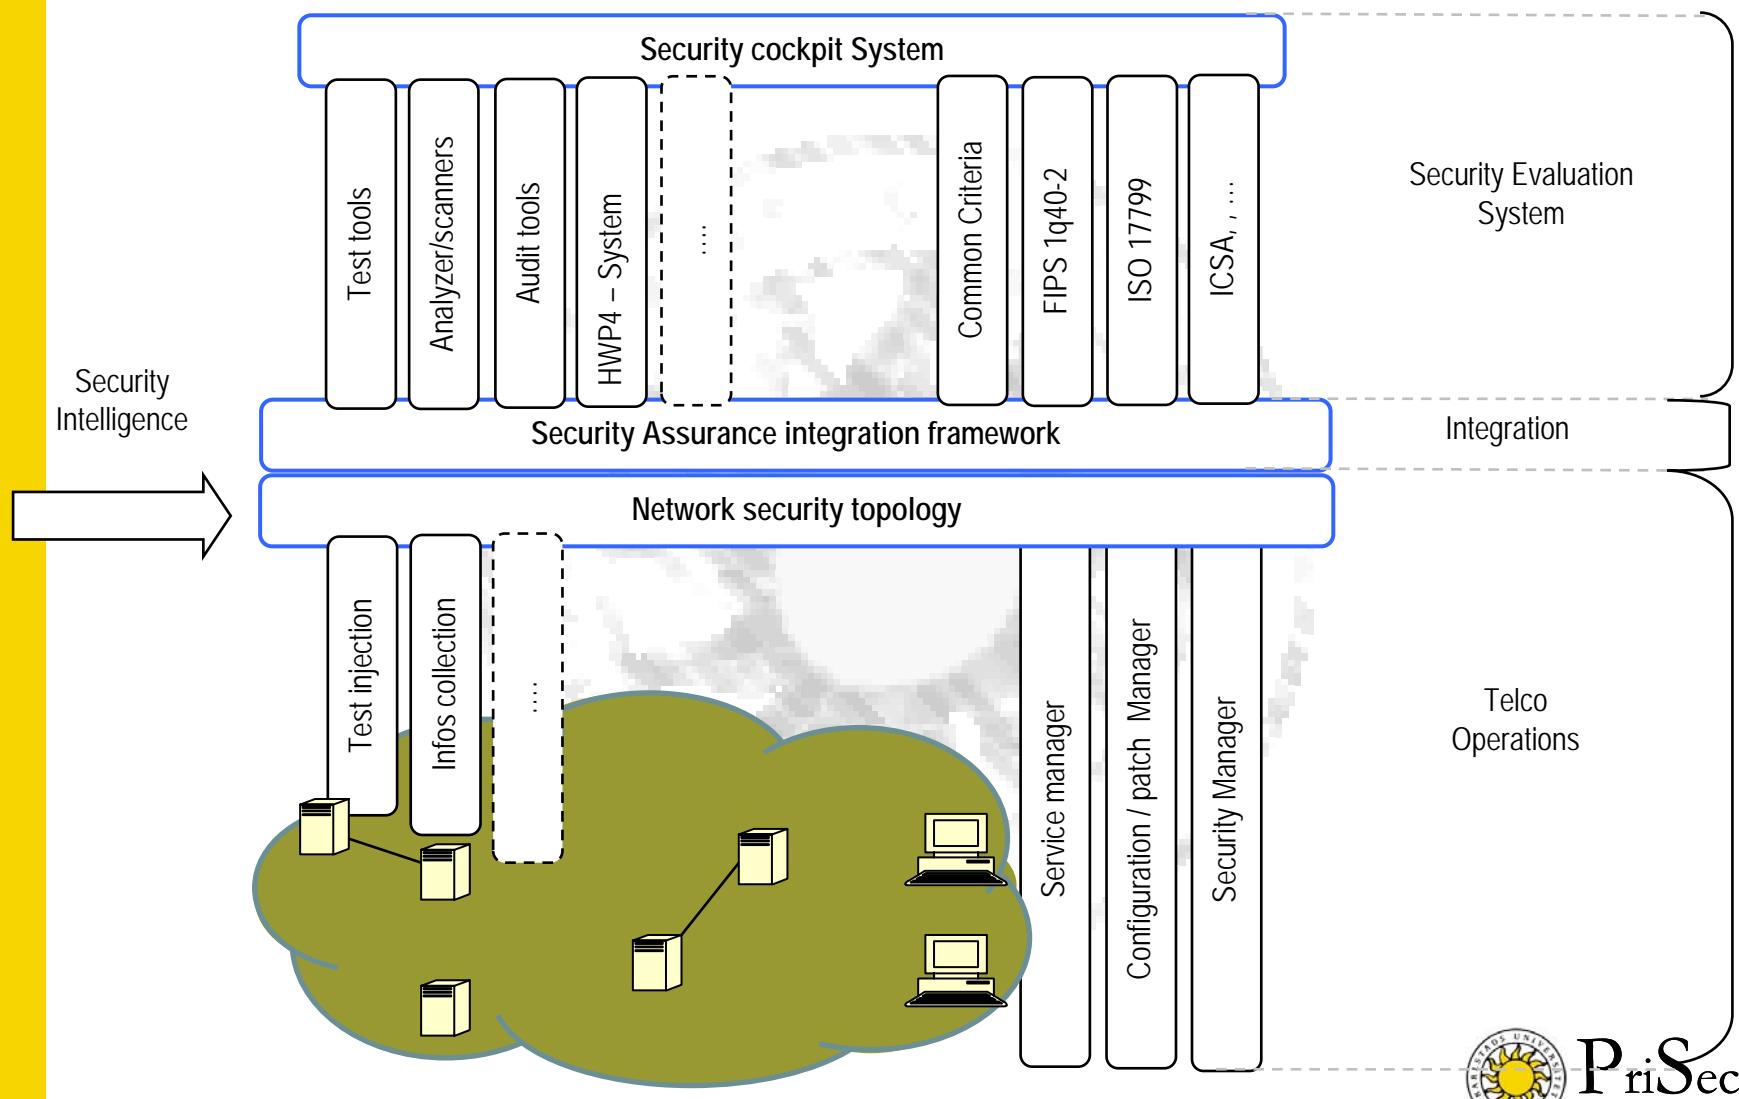

**1- Risk assessment + 2- Security assurance**

# Assurance covered

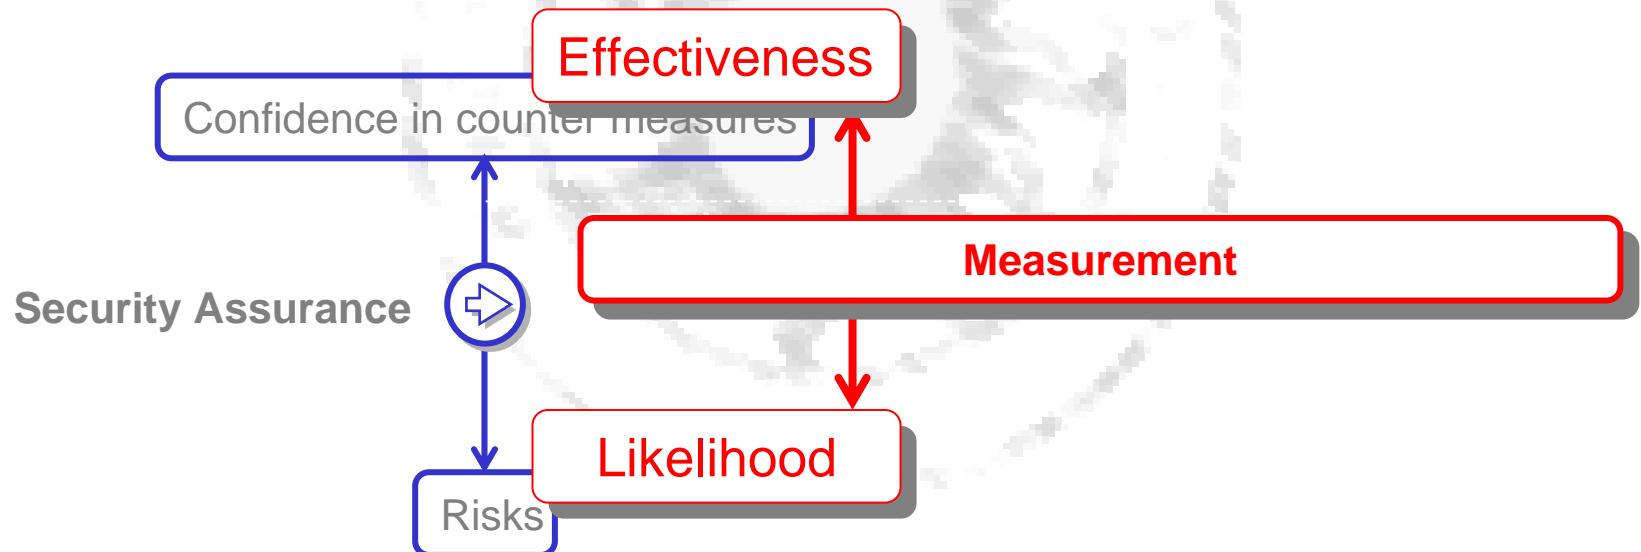

# The approach

# 2 dimensions of security assurance -> 2 possible scenarios of results exploitation

- Assurance is addressing measurement of confidence regarding:
  - Effectiveness of the security countermeasure versus (Alcatel main developer and integration with NMS/OSS )
  - Likelihood of a risk occurrence (EADS main developer as independent product)

# Results

---

## ■ System security assurance framework

- Taxonomy
- Assurance Mark-up Language
- Best practices
- Cockpit

# Result: Security Cockpit
